

ELECTIONS NEXT WEEK.

Interesting contests in New York Maryland, Ohio, Kentucky and Iowa. WASHINGTON, D. C., Oct. 28.—All interest in political circles here now centers in the one-half dozen states in which elections are to take place next week. New York, Maryland, Ohio, Kentucky, Iowa, and Nebraska are the states in which the greatest interest is felt.

The complications in New York city are so great and conditions so unusual that nobody here is willing to make predictions as to the result. That great interest is felt in the election goes without saying, for the effect of the result, whatever it may be, must be widely felt throughout the state of New York, and may determine the party control of the state for a long time.

Great interest is felt in the result in Maryland, both because of the prominence of the central figure in the fight, Senator Gorman, and also the bearing which the election of a senator in that state will have upon the make-up of the United States senate. That the loss of Gorman as a member of the senate would be a very serious one to the Democracy is well recognized by those familiar with his work in that body. Beginning his career as a page in the senate, he has been a good share of his life upon the floor of the senate chamber, and his experience and generalship make him one of the strongest men on the Democratic side of the senate, and one whose loss would be severely felt by that party. The legislation which is to be elected in Maryland next week will select his successor. If that legislature should be Republican, the blow would be a very serious one to the Democratic party with reference to its control of national affairs.

Even more important than the Maryland election is the one which is to take place in Ohio. It is more important because upon its result will probably depend the control of the senate during the first half of President McKinley's term. As everybody knows, Senator Hanna was appointed to the senate to succeed Senator Sherman, and the legislature which is about to be elected will select his successor for the remainder of the term for which Senator Sherman was elected, and for the six years which are to follow the expiration of that term. Should the Democrats carry the Ohio legislature they would elect a senator for the remainder of the term for which Senator Sherman was elected, and also one for the full six-year term which begins March 1, 1899. Should a Democratic legislature be elected, then Senator Hanna now occupies the seat which Senator Sherman would lose if the Republicans would lose control of the senate during the present Congress; hence, great interest is being felt in the Ohio election, both in its general bearing upon national politics, especially as to whether the Republican party will or will not continue in control of the senate.

The Kentucky, Nebraska and Iowa elections, while less important in their bearing upon national politics, are watched with great interest because of the prominence which the silver cause has in the early part of the campaign in each of those states. While none of the officers to be elected in Kentucky or Nebraska in the forthcoming election are to participate in national affairs, or election of a senator, the issues of last year are so closely related to the contests in both those states that interest in them is very great. This is even more especially true of Iowa, where part of the legislature which is to elect a United States senator will be chosen at the coming election.

While few national representatives are to be chosen in the elections now at hand; while national affairs do not hinge directly upon the results of those elections, the greatest interest is felt as to what those results may be because of their bearing upon the issues so prominent in the last campaign. That the silver cause has very rapidly gone to the background since the election last year cannot be doubted. If the Republicans are successful in the close states and the Democratic effort to revive the silver issue in the last moments of the campaign is unsuccessful, the feeling is that the silver cause will not be revived, and will probably cut very little figure in the campaign for members of Congress a year hence.

AGRICULTURAL BULLETINS

Of the Morganston Experiment Station.

Great Value to Farmers of the State.

The recent publications of the West Virginia experiment station have been of more than usual interest, and they are attracting the notice of the practical orchardists and farmers, not only in this state, but also in other states having large fruit interests. In any locality where one county's crop of apples amounted over two hundred thousand dollars there is a deep appreciation of the importance of the right way of raising and handling the fruit.

The bulletin on apples, No. 47 of the West Virginia agricultural experiment station, gives a map of the life zone of the United States, clearing showing how advantageously West Virginia is situated in the fruit belt of our country. Such vital points in apple culture as are treated as the best soil, proper drainage, pruning, spraying, and the varieties best suited to our state. Some interesting figures are given as to the length of life of favorite varieties. Several plates illustrate these different topics, as well as picture the cold storage houses of Hancock county of this state.

Bulletin 48, on raspberries, takes this popular fruit at the very beginning of its history and shows the best methods of preparing the ground, propagating and harvesting the crop, that pays so well in West Virginia. Whether the berry patch is two rows in the family garden or several acres, this bulletin will be helpful. There are plates showing the "berry batter" or picker used in New York on extensive places, a cheap evaporator, and inside views of different dry-houses.

Bulletin 49, on vegetables, takes up beans, peas and tomatoes, and the results are best given in the author's own words before the plan is printed on the first page that one may easily find what is of special interest. There are eighteen deductions printed as the results of the work of several years.

The following is the summary:

1. The same quantity of beans planted in drills will give almost if not quite double the product they will planted in hills.

2. The yield of lima beans can be increased by planting the seed in inverted V in a hole from 1 to 10. Where but a few plants are grown for family use, the increase will more than repay the trouble.

3. Bush lima beans yield well and can, I believe, be made to take the place of the pole sorts. If this is true, the cost of poles and training can be deducted from the cost of growing lima beans.

4. The bush sorts of beans require less space for development than the pole varieties, and consequently a larger return per acre may be expected from bush lima than from pole lima, particularly towards the northern limit of the successful cultivation of the pole lima.

5. It is believed that the limit of the successful cultivation of the bush lima will be found to be further north than that of the pole lima.

6. The test of the year shows a decided advantage in planting peas three inches deep against either deeper or shallower planting.

7. The tomatoes introduced in 1896 emphasize the great variability which this plant has acquired since it was brought under cultivation.

8. The fertilizer test on tomatoes indicates the value of a complete manure for this crop.

9. The fertilizer test clearly shows the superiority of potash fertilizers

NOTICE:

BELDING BROS. & Co., TO JAS. S. KIRK & Co.

Silk Manufacturers,

Soap Manufacturers.

Mess. Jas. S. Kirk & Co., Chicago, Ill.

GENTLEMEN:—

We have given your "White Cloud" soap a thorough test in washing pieces of linen embroidered with our "New Process" Wash Embroidery Silks and find it entirely satisfactory. We take pleasure in recommending it as a superior article for laundering fine embroidery.

Yours truly,

(Signed) BELDING BROS. & Co.

Referring to the above, we deem it important to state that this letter was entirely unsolicited by us. White Cloud Soap now has the highest authority as its endorser as being superior for fine laundry work. For the bath and toilet it also ranks first as a pure white floating soap.

JAS. S. KIRK & Co., Chicago.

Established 1839.

Largest soap manufacturers in the world.

among the special manures used, and the advantage to be gained in the use of sulphate of potash over the muriate in fertilization of tomatoes.

10. The balance of evidence given in the test of seedlings vs. cuttings of tomato plants in outdoor culture favors the cuttings both in earliness and the total crop of the season. The fruits, however, are smaller than those of the seedling plants.

11. The one test of seedlings vs. cuttings in the house gives a verdict decidedly in favor of the seedling plants.

12. The more care given young tomato plants, previous to planting in the garden, the larger the yield.

13. Treating your tomato plants, according to the best approved methods, before planting in the field, increases the yield sufficiently to more than pay the cost of the extra equipment and labor.

14. Training tomato plants to a single stem hastens maturity of the fruits and somewhat increases their size.

15. Tomato plants trained in racks give a larger yield than those trained by any other method.

16. The date of seed growing that gave the largest yield of fruit was March 2.

17. The use of a straw mulch under tomato plants reduced the rot nearly one-half.

18. Pruning tomato plants after the crop was set hastened the maturity of the fruits, but slightly decreased the season's crop.

Bucklen's Arnica Salve.

The best salve in the world for cuts, bruises, sores, ulcers, salt rheum, fever, corns, and all skin eruptions, and positively cures piles, or no pay required. It is guaranteed to give perfect satisfaction or money refunded. Price 25 cents per box. For sale by Logan Drug Co.
